

Electronic Ballast

GI - INDUSTRIAL

Consumes very low power compared to conventional electrical ballast, resulting in virtually saving >35% energy.

Wide range of operating voltage between 100-300 V.

Operates at high frequency > 20 kHz. Eliminates audible noise and starts instantly with flicker free operation.

Has a long life expectancy, rated life of tube is upto 5000 burning hours.

Offers long life to ballast and that gives longer flourescent tube life due to less cathod current. leaves no black ends at both ends of the tube.

GELCO has incorporated Radio Frequency Interference (RFI) / Electro Magnetic Interference (EMI) filters in commercial and industrial models to avoid electrical noise on to the power line which can interfere to other equipments.

High Power Factor and Low Harmonic Distortion.

GP - COMMERCIAL
